Bowen Wharf Refurbishment Study - Testing Report

In 2019 North Queensland Bulk Ports engaged global consultancy firm Arup to undertake condition assessment and refurbishment optioneering for the existing Bowen Wharf as part of the Bowen Wharf Future Options Assessment.

As part of these studies Arup carried out a range of physical testing and inspection on the timber elements, concrete headstocks and concrete piles.

The condition assessment, along with a load assessment formed the basis for Arup recommendations on timber replacement and strengthening works which were subsequently carried out between February and August 2021 as part of the Bowen Wharf Project.

The testing, dive survey and heat maps captured as part of the Bowen Wharf Future Options Assessment, Testing Report can be accessed as Appendix A to E.

The Timber Testing, presented as Appendix A and Heat Maps presented as Appendix E may not be representative of the current condition of the timber elements due to replacement and strengthening works carried out as part of the Bowen Wharf Project, 2021.

Appendix B

Public Wharf Headstock & Deck Testing

Date of Issue: 13 August, 2019

Draft Issued: 22 July, 2019

Site Visit(s): 2nd, 3rd, and 4th July, 2019

Report #: 2019-742 ARUP-Bowen Wharf

Client: ARUP

Your reference: Purchase Order 264408-00

Contact: Peter Kastrup < Peter. Kastrup@arup.com > 0431 674 734

Job Description: Ground Penetrating Radar (GPR) and testing of the public section of the Bowen Wharf,

Bowen, QLD.

Equipment: Ridgid Seek Tech SR20 Line Locator Serial # 213-12959

Passive Trace 50Hz, 50Hz⁵ and 50Hz⁹

GSSI Ground Penetrating Radar (GPR) with 2600 MHz antenna (Polarised only) Serial

00452

Cover meter, Proceq Profoscope+ (Serial # PS02-002-0879 BO).

Water cooled diamond coring rig capable of bolting to the surface.

Water management system for slurry capture.

Procedure(s): In accordance with the manufacturers instructions.

AS1012.14-(6.2) Methods of testing concrete - Method for securing and testing cores

from hardened concrete for compressive strength.

AS1012.12.1 Methods of testing concrete - Determination of mass per unit volume of

hardened concrete - Rapid measuring method

AS1012.9 Methods of testing concrete - Determination of the compressive strength of

concrete specimens

CD-CL002-Chloride Content -- Chloride Content in Hardened Concrete Acid digestion

and potentiometric titration (based on BS1881-124).

Report Prepared by:

M Land John.

Matthew Lamb-Johnson - Managing Director

Concrete Diagnostics Pty Ltd PO Box 4518 Springfield QLD 4300 Phone **0458 772 327** ABN 71 153 930 422

Disclaimer and Important Notes.

No site structural drawings were received. Headstock #01 is the second headstock (Headstock #02 is the next headstock towards land) from the water end of the wharf.

For the convenience of this report north (report north) will be the land side and south (report south) will be seaside, see image below for clarification. This is not true or magnetic north.

GPR cannot determine the diameter of reinforcement. Bar size measurements ± 2 mm were performed by concrete breakout where directed.

Slab depth $\pm 10\%$ determined by core or drilling.

Reinforcement spacing ±20mm was averaged in the test location over a distance of at least 1 m.

Whilst all care is taken, no warranties expressed or implied that the information contained within this report is free of errors or omissions and no liability is taken over non-detection of targets or GPR reflections interpreted incorrectly.

Reinforcement will be detected perpendicular to the line scan direction. E.g. a scan running south to north will only detect reinforcement running east/west.

Site image from Google Maps

Topside - Deck Scanning, Coring and Testing

Topside core #1 location, land side (north) of headstock #01, western side of longitudinal wharf crack

Slab consisted of three (3) layers, A, B and C

Layer A – 90 mm thick with no reinforcement detected.

There was a 10 mm void between layers A and B

Layer B-120 mm thick. A bar was clipped during the coring and showed significant corrosion, size is not clear, possibly 12 mm.

There was a 20 mm void between layers B and C

Bar spacing NS bars 230 mm

Bar spacing EW bars 215 mm

Layer C – Core split at 55 mm, the remaining core had a total height of 175 mm. A pilot hole suggested layer C was 200 mm thick. The reinforcement was too deep to detect by radar. A 12 mm round smooth bar running EW was discovered with about 175 mm of cover in layer C.

Total deck thickness 410 mm

Layer C split with visible white deposits (left image). Smooth round 12 mm bar running EW towards the soffit of layer C (right image).

Email: admin@concretediagnostics.com.au

Topside core #2 location, land side (north) of headstock #02, western side of longitudinal wharf crack

Slab consisted of three (3) layers, A, B and C

Layer A – 90 mm thick with no reinforcement detected. Layers A and B were still bonded

Layer B - 120 mm thick.

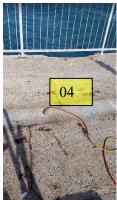

There was a 15 mm void between layers B and C Bar spacing NS bars 250 mm Bar spacing EW bars 130 mm

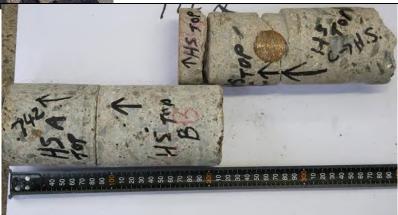

Layer C – Core split at 55 mm, the remaining core had a total height of 180 mm. A pilot hole suggested layer C was 200 mm thick. The reinforcement was too deep to detect by radar. A 12 mm round smooth bar running NS was discovered with about 35 mm of cover in layer C.

Total deck thickness 410 mm

An additional core hole was extracted 1.2 m from the western edge of the wharf, just over headstock #02 / Core location labelled as Topside #4

Slab consisted of three (3) layers, A, B and C and headstock

Layer A-85 mm thick with no reinforcement detected. Layers A and B were not bonded

Layer B – 120 mm thick.

There was a 10 mm void between layers B and C

Bar spacing NS bars 230 mm Bar spacing EW bars 190 mm

Dai spacing Ew bars 190 mm

Layer C (structural slab and headstock)- Core split at 25, 110 and 220 mm.

The reinforcement was too deep to detect by radar.

A 12 mm round smooth bar running EW was discovered with about 45 mm of cover in layer C.

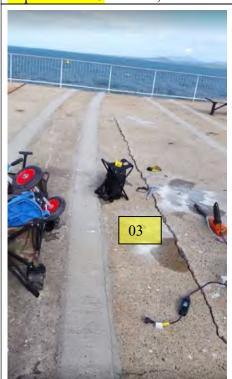

A 32 mm round smooth bar running NS was discovered with about 70 mm of cover in layer C.

A large diameter bar was discovered at the bottom of section C (220 mm), section of bar was given to the client, an image of the bar is shown below.

Topside core #3 location, land side of headstock #03, eastern side of longitudinal wharf crack

Slab consisted of three (3) layers, A, B and C

Layer A - 90 mm thick with no reinforcement detected.

Layers A and B were not bonded, there was no void between A and B.

Layer B - 120 mm thick.

There was a 15 mm void between layers B and C.

A 12 mm NS round smooth bar was in layer B at a depth of 25 mm.

Bar spacing NS bars 225 mm

Bar spacing EW bars 140 mm

Layer C-130~mm core. A pilot hole suggested layer C was 180 mm thick. The reinforcement was too deep to detect by radar.

Total deck thickness 390 mm

Underside - Headstock Scanning, Coring and Testing

Headstock 01 - North face

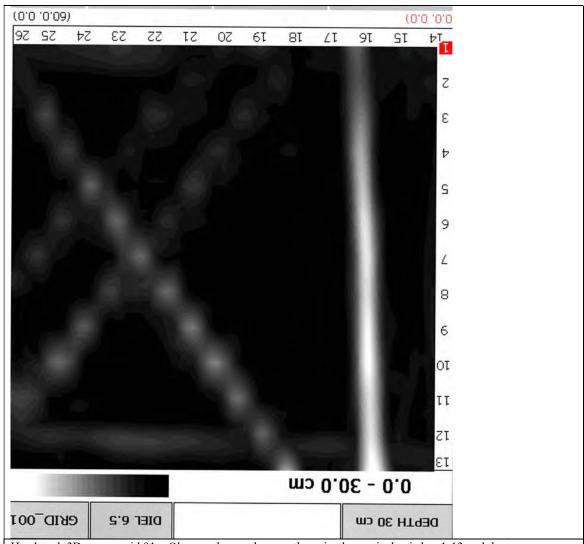

3D scan – grid 01 – Note origin is up the top right corner of the grid paper.

Approximate bar locations marked up above for **illustration** only, see below for radar image and bar positioning.

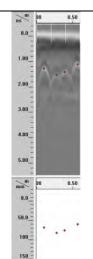

Blue bars horizontal and vertical, orange bars diagonal downwards away from the cross brace, red bars diagonal upwards away from cross brace.

Circle indicates bar that was broken out for sizing.

Headstock 3D scan – grid 01 – Observe the numbers on the axis, the vertical axis has 1-13 and the top horizontal axis has numbers 14 - 26. These are the individual line scan files that are processed with more detail below.

File	Scan distance m	Depth mm	Velocity mm/ns	Time ns	Target

Line scan 17 vertical scan from 3D grid 01 – Note data moves from right to left as the origin was inverted.

Radar could not detect any reinforcement on the northern (land) side running adjacent to the crack in the head stock (as shown above). This could be due to there being no steel present, heavily chloride contaminated concrete or the steel has been severely corroded.

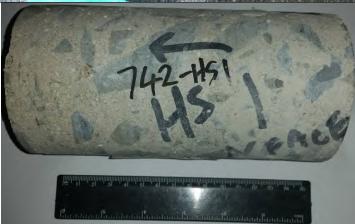

Breakout of upwards diagonal bar – 12 mm round (not deformed/ribbed)

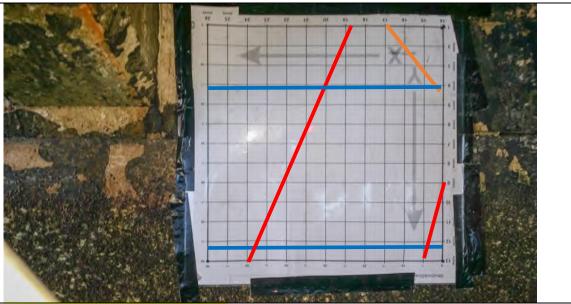

Core and breakout Headstock #01 North face location. Core removed for strength, image taken after crushing.

2019-742 ARUP

Email: admin@concretediagnostics.com.au <u>www.concretediagnostics.com.au</u>

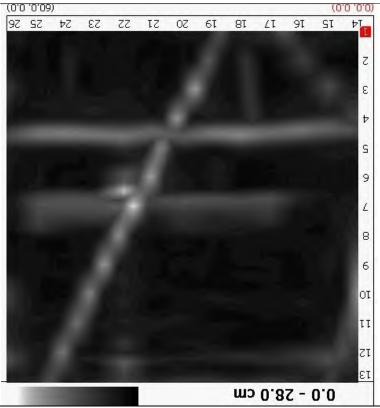

Headstock 02 South face, east of cross brace

3D scan – grid 02 – Note origin is up the top right corner of the grid paper.

Approximate bar locations marked up above for illustration only, see below for radar image and bar positioning.

Blue bars horizontal and vertical, orange bars diagonal downwards away from the cross brace, red bars diagonal upwards away from cross brace.

Headstock 3D scan – grid 02 – Observe the numbers on the axis, the vertical axis has 1-13 and the top horizontal axis has numbers 14 - 26. These are the individual line scan files that are processed with more detail below. A few possible artifacts appear from the hyperbola of the diagonal bars, these are the horizontal line at line 7 and the vertical line at 18.

Concrete Diagnostics Pty Ltd PO Box 4518 Springfield QLD 4300 Phone **0458 772 327**

ABN 71 153 930 422

Terms and Conditions

Definitions

- "Service Provider" means Concrete Diagnostics A.B.N. 71 153 930 422
- 1.2 "Client" means the person(s) who has requested the goods and/or services from the Service Provider.
- 1.3 "Clients Representative" means any person the client has given authority (written or verbal) to act on behalf of the client.
- 1.4 "Services" means any services or goods provided by the service provider to the client.
- 1.5 "Force Majeure Event" means any event or circumstance beyond the service provider's reasonable control, including but not limited to the following:
 - Act of God, weather such as rain, storm, flood lightning, earthquake or fire,
 - act of declared or undeclared war, riot, civil disturbance or release of nuclear or radioactive material, act of government or council authority restricting services.

2 Acceptance

- 2.1 Any instruction received by the service provider from the client for the supply of services this may be written or verbal.
- 2.2 Acceptance of works is also deemed to be acceptance of all our terms and conditions and any test restrictions that may apply.

3 Clients Responsibilities

- 3.1 The client is responsible for supplying adequate information on the site and location of reinforcement, stressing cables, services and amenities within concrete, ground or building.
- 3.2 The client shall insure the work site is free of tools, materials debris, and any other obstacles that may hinder the service provider.
- 3.3 The client is responsible to reduce any delays outside of the Service Providers control so as to avoid additional charges.
- 3.4 The client shall insure a smooth working surface free of adhesives, concrete, grout and dust.
- 3.5 The client is responsible for directing scanning locations or determining the degree of scanning or testing. The service provider does not offer advice on the degree of scanning or testing that may be required.
- 3.6 On completion of the services the client or clients representative shall be in attendance and the services duly measured. Should neither the client nor the clients representative be present the service provider shall assess the situation and take relevant measurements. This assessment and measurement shall be deemed conclusive evidence the services have been provided.
- 3.7 Any samples submitted by the client must be correctly labeled in a legible fashion with the surface clearly identified. The service provider shall not be liable for any loss or damage caused due to incorrectly labeled samples.
- 3.8 If working at heights the client shall supply all lifting equipment and associated safety equipment including harnesses unless otherwise arranged in writing for the service provider to supply lifting equipment.
- 3.9 The client is responsible for supplying or additional charges will apply for PPE outside of our standard issue. Our standard issue PPE include, cotton long sleeve shirts, hardhat, steel cap boots, safety glasses, dust masks, ear plugs and gloves.

4 Concrete and Ground Scanning

- 4.1 When offering a concrete or ground scanning service it should be noted this is a risk reduction service and will reduce the likelihood of cutting unwanted objects. However there are limitations with all equipment and hidden targets within concrete may still remain undetected. The Service Provider shall not be liable for any loss or damage including consequential loss caused due to undetected or misinterpretation of amenities or structural infrastructure such as, but not limited to, reinforcement, stressing cables, water, gas, electricity, optical cables, telephone, internet, cables or other amenities
- 4.2 Scanning should be used in conjunction with structural drawings and information of immersed or buried services. If these are not available, investigative drilling, high pressure water blasting or vacuum extraction should be used prior to coring, drilling or digging.
- 4.3 The service provider shall not be liable for any loss or damage caused in accessing the work site.

Reports

- 5.1 The report issued is for the clients use only. If the client releases or discloses the report to a third parties the client does so at their own risk and indemnify the service provider against responsibility and/or liability.
- 5.2 The service provider prepares the report on the basis of client instruction, equipment results and sample material(s) received from the client and therefore makes no representation or gives any opinion in relation to materials that have not been tested by the service provider.
- .3 Reports only apply to samples as submitted by the client.
- 5.4 Whilst all care is taken, the service provider does not make any warranties, expressed or implied, that the information contained within reports is free of errors or omissions. The service provider does not offer professional advice and interpretation of any and all results is the responsibility of the client.
- 8.5.5 Reports are issued on good faith that the material supplied has not been interfered with, or the client has misrepresented or mislabeled the samples. The service provider will not be liable for any samples that have been interfered with or have been misrepresented or mislabeled.
- i.6 No part or parts of the report shall be reproduced expect in full.

Cancellation

6.1 The service provider may cancel these terms and conditions or cancel delivery of services at any time before the services have been delivered. The client will be notified of services being cancelled with written notice. The service provider shall not be liable for any loss or damage caused by the cancellation.

7 Consequential Loss

The service provider or its sub-contractors, employees and/or agents are not liable for consequential loss and/or indirect financial loss or damage.

B Limitation of Liability

8.1

8.2

The service providers limit of liability to the Client whether in contract or in tort and whether for negligence or otherwise is hereby limited to the total aggregate amount of \$10,000 or re-performance of the services whichever is the lesser. The service provider shall in no event be liable to the Client in respect of matters not notified within 12 months from completion of the Services. The client hereby irrevocably agrees to indemnify the service provider safe from any loss or damage incurred in excess of the said aggregate amount. If the service provider is prevented in whole or in part from completing the services by Force Majeure Event, the services are to be suspended or cancelled. This will not be considered a breach of contract and the service provider shall not be liable for any loss or damage caused by the cancellation.

Service Provider Entitlements

- 9.1 The service provider is entitled to sub-contract any or all of the services to be supplied to the client, but in doing so the service provider is not relieved of its obligations to the client under the contract.
- 9.2 Due to the technical nature of our equipment delays or cancellation may occur due to equipment malfunction. The service provider will notify the client of any such malfunction and organize an alternate time for testing. This does not constituted a breach of contract.
 - Any materials submitted by the client or collected by the service provider will be retained for 30 days after the provision of the report. After the 30 days the service provider reserves the right to depose of all materials or charge a rental fee at cost + 15%
- 9.4 Any materials submitted by the client or collected by the service provider where there is no provision of a report will be retained for 30 days after submission or collection. After the 30 days the service provider reserves the right to dispose of all materials or charge a rental fee at cost + 15%
- 9.5 If equipment hire is required the service provider can charge the hire or rental fee plus 15%.
- 9.6 Any quote or proposal is valid only for 30 days from the date of issue. Any samples associated with a quote or proposal will be disposed of after 30 days from the date of issue, if the client has not notified their acceptance of the quote or proposal.

0 Hours of operation

- Normal hours of operations are Monday to Friday excluding public holidays between 06:00-18:00. Works performed outside of these hours may incur additional charges, with a minimum four hour callout.
- 10.2 Day rates are based on up to 8 hours in the same day including travel.

1 Credit

- 11.1 The client is not entitled to any credit facilities unless approved by the service provider in writing
 - 2 Until the client receives written notification that credit has been approved the client shall pay a deposit of the estimated fee before commencement of services.
- 11.3 The remainder of the fee will be payable on the supply of the services on a "cash on delivery". The service provider retains the right to withhold any services including any report until payment.
- 11.4 If credit has been granted to the client payment must be made no later than fourteen (14) days after the date of invoice. Payment is to be made as instructed on the invoice.
- 11.5 Where invoices become overdue, you will be contacted to arrange payment. Every effort will be made by the service provider to collect payment from you, however, the service provider may, at its sole discretion, engage a collection agency to collect any overdue payments on our behalf. In some jurisdictions, the costs of engaging a 3rd party to collect outstanding payments can be passed to the customer. It is your responsibility to pay us for services we provide to you and by the due date.
- 11.6 Any amounts not paid by the due date shall accrue interest at the rate of 0.069 percent per day, calculated from the day after the due by date stated on the invoice. Each notice sent to the client shall incur a \$30+GST administration fee. Third party collection fee approximately 15% of the total outstanding amount.

FINAL REPORT BOWEN WHARF UNDERWATER PILE INSPECTIONS

CLIENT: ARUP Group PTY Ltd

JOB NO: 1243

DESCRIPTION: Underwater Pile inspections at Bowen Wharf, Bowen

CALL OUT DATES: 1st - 5th July 2019

DIVE PERSONNEL: All diving personnel used were qualified and certified in

accordance with Australian Standard for the Training and

Certification of Occupational Divers AS 2815

Dive Supervisor: Steven Gouws

Diver: Nathan Marsh

Diver: Neil Ritchie

Diver/Coxswain: Narai Cousins

FINAL REPORT BOWEN WHARF UNDERWATER PILE INSPECTIONS

TABLE OF CONTENTS

1. INTRODUCTION

- 1.1 General
- 1.2 Safety and Compliance

2. SCOPE OF WORKS

- 2.1 Clean 2 x 300mm bands per pile with water blaster unit
- 2.2 Inspection of 48 nominated piles noting defects including: Cracking, Spalling, Delamination and evidence of Reinforcement Corrosion

3. RESULTS

- 3.1 Middle Wharf Stem
- 3.2 Outer Wharf Stem
- 3.3 Coal Pier Stem
- 3.4 Berths 1 & 2 Public Access Wharf
- 3.5 Berths 3 & 4 Tug Operations Wharf

4. CONCLUSION

APPENDIX B - RECORD OF DIVE LOGS

APPENDIX C - PROJECT PHOTOGRAPHS & VIDEO LOGS

INCLUDED – USB MEMORY (PILE DATA SHEET. PHOTOS AND VIDEOS)

FINAL REPORT BOWEN WHARF UNDERWATER PILE INSPECTIONS

1. INTRODUCTION

1.1 General

This document summarises the results of the Bowen Wharf Underwater Pile Inspections, as requested by Mr Peter Kastrup on behalf of ARUP Group PTY Ltd.

The works were completed between 1st and 5th of July 2019.

1.2 Safety & Compliance

All work was performed in accordance with the following:

- Queensland Work Health and Safety Act 2011
- Queensland Work Health and Safety Regulation 2011 Part 4.8 Diving Work
- Pacific Marine Group's Quality Assurance System
- AS/NZS 2299.1:2015 Occupational dive operations

A pre-start meeting / safety briefing, hazard assessment and equipment function / safety checklists were conducted daily prior to commencement of work.

The diver was briefed on his task prior to entering the water.

2. SCOPE OF WORKS

To carry out underwater visual inspections of the Wharf Piles at Bowen Wharf according to the specific requirements on the ARUP Group provided Scope of Works as described below.

2.1 Water-blaster Cleaning:

Cleaning 2 x 300mm wide inspection bands per pile below the Lowest Astronomical Tide level as per the clients' instructions.

2.2 Pile Inspections:

Inspections of 48 nominated piles noting defects including: Cracking, Spalling, Delamination and evidence of Reinforcement Corrosion.

FINAL REPORT BOWEN WHARF UNDERWATER PILE INSPECTIONS

3. RESULTS

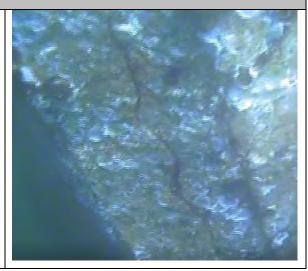

3.1 MIDDLE WHARF STEM

All three piles inspected at the middle wharf stem have vertical cracking as a result of, what appears to be, reinforcement corrosion within the piles.

As these three piles are exposed at low tide, only one RL was cleaned and inspected as per clients' instruction.

A comprehensive defect summary can be referenced in the Pile data sheet provided.

Video footage can be referenced in the video USB provided.

3.2 OUTER WHARF STEM

Five out of the eight piles inspected at the outer wharf stem have vertical cracking as a result of, what appears to be, reinforcement corrosion within the piles.

As well as cracking, there appeared to be evidence of 'corrosion bleeding' at pile number P115-C as can be seen in the adjacent photo.

A comprehensive defect summary can be referenced in the Pile data sheet provided.

Video footage can be referenced in the video USB provided.

FINAL REPORT BOWEN WHARF UNDERWATER PILE INSPECTIONS

3.3 COAL PIER STEM

All of the piles inspected at the coal pier stem have vertical cracking as a result of, what appears to be, reinforcement corrosion within the piles.

A fair amount of chipping was seen along the chamfered edges of the piles.

Cracking was also noted between the horizontal brace members and the vertical piles.

A comprehensive defect summary can be referenced in the Pile data sheet provided.

Video footage can be referenced in the video USB provided.

3.4 PUBLIC ACCESS WHARF

Most of the inspected piles at the public access wharf have vertical cracking.

A fair amount of chipping was seen along the chamfered edges of the piles.

A comprehensive defect summary can be referenced in the Pile data sheet provided.

Video footage can be referenced in the video USB provided.

FINAL REPORT BOWEN WHARF UNDERWATER PILE INSPECTIONS

3.5 TUG OPERATIONS WHARF

All of the piles inspected at the tug operations wharf have vertical cracking as a result of, what appears to be, reinforcement corrosion within the piles.

Horizontal cracking was also seen at piles P330-M-R and P350-M-R

A fair amount of chipping was seen along the chamfered edges of the piles.

Cracking was also noted between the horizontal brace members and the vertical piles.

A comprehensive defect summary can be referenced in the Pile data sheet provided.

Video footage can be referenced in the video USB provided.

FINAL REPORT BOWEN WHARF UNDERWATER PILE INSPECTIONS

4. CONCLUSION

Pacific Marine Group successfully completed the Underwater Pile inspections at Bowen Wharf, as requested by Mr Peter Kastrup, on behalf of ARUP Group PTY Ltd.

The diving services provided by Pacific Marine Group were carried out in compliance with AS/NZS 2299.1:2015 as required by the Queensland Work Health and Safety Act 2011. All work was carried out under our internationally certified Quality Assurance Program based on ISO 9001:2015.

Report compiled by Steven Gouws

Date: 15th July 2019
